

ZARGES

NO CHANCE FOR WATER AND DUST

ZARGES K 470 IP 65 – universal containers:
Setting new standards for ingress protection

ZARGES
INNOVATION
2010

You demand a great deal when it comes to protecting and transporting your equipment? You need to know that it is protected against dust, water or pressure differences?

The no-compromises solution:

ZARGES K 470 IP 65
now dust-tight & jetting
water proof – in compliance
with DIN 60 529

NEW!

ZARGES universal container K 470 IP 65 Innovation for your toughest applications

ZARGES

→ **ZARGES has once again optimised its very successful and legendary universal container K 470:**

- These containers come into their own wherever you need to protect valuable and sensitive equipment against extreme environmental conditions. For decades, a wide range of satisfied customers from all walks of life, such as the armed forces, scientists, explorers and numerous other professional users, have relied on the high quality standards offered by ZARGES containers.
- Up to now, the containers have been supplied as standard with reliable protection against dust and splashwater (IP54). Now, our new model can be used wherever you require that little bit more impermeability and increased protection against moisture, jetting water and dust – for example for assembly on vehicles, boats etc.
- Ingress protection of class IP65 is achieved by means of an optimised lid seal with additional silicone sealing.
- A further highlight of this innovative equipment: To ensure that the lid can be opened reliably even after changes in air

pressure, the K 470 IP 65 is equipped with an automatic pressure compensation valve. A Gore™ membrane ensures that pressure differences are continuously compensated for and is at the same time impermeable to dust, salt, water and other liquids. And thanks to the automatic valve, operating errors can be ruled out.

- The K 470 IP 65 was subjected to rigorous testing for imperviousness to dust and jetting water by the TÜV SÜD, passed the tests with flying colours and was awarded the TÜV seal.

- The optional seal is available for all K 470 sizes offered in our catalogue, with just a few exceptions. In addition, you can also choose to combine this new version with additional UN approval for the transportation of hazardous goods.

- **ZARGES innovations for your specific requirements:** State-of-the-art aluminium multipurpose containers which not only offer optimum protection against moisture and dust, but are also suitable for the transportation of explosive, toxic, infectious, caustic or flammable liquid materials.

ZARGES K 470 IP 65: We have the right size for all your applications.

**Now, only from ZARGES:
The aluminium case with
IP 65 certification (dust-tight
and jetting water proof).**

TÜV tested

Automatic compensation membrane

All-round foamed lid seal

Jetting water proof

Dust-tight in compliance with standard IP 65
